題目鏈接: TIMUS 1595

題目大意

要求構造一個滿足如下條件的序列:

- 1.包含數字 1..N(N<=250000)
- 2.長度不超過 2*N
- 3.所有的數字都是不同的且小於 10~13
- 4.前 K 個數字的和能夠被 K 整除

算法分析

參考代碼

```
TMUS 1595

*/
#include<cstdio>
#include<cstring>
#define MAXN 250013
long long a 2 * MAXN ];
int n, m;
long long sum;
bool h[ MAXN ];
int min( int a , int b ) { return a < b ? a : b ; }
void constr()
int cnt = 2, k = 2;
long long t, i, bigmin = n + 1;
```

¹ 測試結果如此,沒有經過證明。

```
//memset( h , false , sizeof( h ) );
 h[1] = true;
 sum = 1;
 a[1] = 1;
 while (cnt \le n)
  {
   i = sum / k + 1;
   while (i * k - sum \le n and h[i * k - sum]) ++ i;
   t = i * k - sum;
   if(t > n)
    while (t < bigmin) t += k;
    bigmin = t;
   sum = i * k;
   a[k ++] = t;
   if( t <= n ) { ++ cnt; h[ t ] = true;}</pre>
 m = k - 1;
return;
int main()
scanf( "%d" , &n );
 constr();
 for( int i = 1; i \le m; ++ i ) printf("%lld ", a[i]); printf("\n");
 return 0;
```
