## 2012 Chengdu Regional Online B Control Solution

本作品採用<u>知識共享署名-非商业性使用-相同方式共享 3.0 Unported 許可協議</u>进行許可write by Gestalti Lur 2012-09-18

題目鏈接: http://acm.hdu.edu.cn/showproblem.php?pid=4289

## 題目大意

給出一個  $N(N \le 200)$  個點和  $M(M \le 20000)$  條邊的無向無權圖計算從 s 到 t 點權最小的割點集合的權值。

## 算法分析

對於原圖上的每個點拆成兩個點 i,i',從 i 到 i'連一條流量爲該點點權的邊,對於原圖的每條邊(u,v),在流網絡上加入(u+N,v)和(v+N,u)兩條邊,流量爲正無窮,原點和匯點分別爲 s 和 t',計算最大流。取最大流值和 s,t 點權值的最小者即爲答案。

## 參考代碼
